## HADAR STAGE

Northgate can work with you to design one off solutions for dividing both permanent and temporary spaces, with our Hadar stage track systems and custom designed equipment. These are ideal for use in the entertainment industry and have a reputation for simple design, rugged construction and ease of installation. They can also be used for something unusual for a super-yacht, a cruise ship or a system to divide a sports stadium, we can design and build whatever you can dream up.

### 2 Way

Northgate's 2 Way Track is a medium duty system designed for walkalong use such as side masking curtains, perimeter tracks in studios, acoustic curtains or any other application where walk along operation is required. It is intended for systems where cording isn't required. The 2 way track can be rolled to any radius, the min being 750mm and is stocked in lengths of 6.1m. The external dimensions of the 2 Way track are 35mm (1 3/8") wide x 40mm (1 5/16") high.

### Unitrack

Northgate's Unitrack System with its simple one bolt and four spigot gives the user a 'jam free' running surface. Ball raced runners and nylon pulley sheaves add further to the smooth, silent operation. Its versatility and simplicity mean that we can provide most solutions with standard parts or if necessary custom design to suit your requirements. With the addition of a Trackdrive motor, you will achieve a fully motorised system.

### Unibeam

The Northgate Unibeam is an aluminium extruded anodised track section. The standard stocked length for Unibeam is 6.1m and is rigid enough to be used as a suspension beam. It can be pre-rolled to a minimum radius of 2m and the symmetrical design allows it to be used either way up. With the addition of the Trackdrive motor it can become a fully motorised system.

2 Way Single Overlap Black

2 Way Single Wipe Track Black

2 Way Walkalong L-Shape Wipe Black
